

A0852001 Havana Ribbon RGB-30 24V

Technical specifications:

LED system: 150x 0.24W RGB-in-one LED (5050)
 View angle: 120°
 Light output Red: 300 Lumen/5mtr. (60 Lumen/mtr.)
 Light output Green: 600 Lumen/5mtr. (120 Lumen/mtr.)
 Light output Blue: 375 Lumen/5mtr. (75 Lumen/mtr.)
 Light output White: 1275 Lumen/5mtr. (255 Lumen/mtr.)
 Power consumption: 5mtr max. 3x1A (36W)
 1mtr max. 3x0.2A (7.2W)
 Strip: IP20 (indoor use)
 Cutting length: 167mm (5 LED's) = 1.2W
 Working temperature: -20°C until +50°C
 Front: white PCB
 Backside: Self adhesive 3M tape

The Havana Ribbon should not be used in hot places
 The best heat dissipation is to mount the Ribbon on an aluminum strip
 or Arctecta Alu-Pro Profile. Ensure a proper heat dissipation

0.03	24V DC	Class III	IP20	Light-output / meter 255Lm	120° symm. LED-lens	L 5000 W 12 H 2.2
------	--------	-----------	------	-------------------------------	---------------------------	-------------------------

5 meter Havana Ribbon is packed on reel, in anti-static bag

Advised 24V DC LED powersupplies:

A9900360 DC 24V 30W (load max. 3m A0852001)
 (Dimensions: 145x47x30mm / 0.22 Kg)

A9900361 DC 24V 60W (load max. 5m A0852001)
 (Dimensions: 181x62x35mm / 0.50 Kg)

A9900362 DC 24V 96W (load max. 2x5m A0852001)
 (Dimensions: 200x71x35mm / 0.52 Kg)

Advised RGB DMX controllers:

A9915060 Domotion DLC-4 black
 A9915061 Domotion DLC-4 white

A9915070 Domotion DLC-9

Advised DMX RGB PWM Dimmers:

A9915015 Domotion 3 ch. DMX Dimmer
 (Max. load: 2x 5mtr Havana Ribbon-30)

A9915011 3 ch. DMX Dimmer
 (Max. load: 4x 5mtr Havana Ribbon-30)

Dimensions in mm

Notes:

UK
The thickness of the 24V DC cable depends on the total cable length and total power consumption of all connected fixtures. (See page 3)

NL
De diameter van de 24V DC-kabel is afhankelijk van de totale lengte van de kabel en het totale stroomverbruik van alle verbonden toestellen. (zie tabel op pagina 4)

D
Der Durchmesser des 24V DC-Kabels hängt von der Gesamtlänge des Kabels und der gesamten Leistungsaufnahme aller angeschlossenen Geräte ab. (Siehe Seite 5)

FR
Le diamètre du câble d'alimentation 24V DC dépend de la longueur totale du câble et la consommation électrique totale de tous les périphériques connectés. (voir page 6)

ES
La sección del cable de 24V DC depende de la longitud total del cable y el consumo de energía total de todas las luminarias (véase la página 7)

IT
Il diametro del cavo 24V DC dipende dalla lunghezza totale del cavo e il consumo di energia totale di tutti apparecchi collegati.

Recommended cable conductor surface (mm²) with cable lengths of 1-50 meters. for parallel connected 24 volt LED fixtures.

Note; This table is an obligation and not a binding opinion. If necessary, make a electrical resistance calculation ($Pouillet A \times R = p \times l$)

24 Volt	Cable inner conductor 1.5mm ²					Cable inner conductor 2.5mm ²					Cable inner conductor 4mm ²

- As much as possible shortest path for the 12V cables
- Branching cables without interrupting the main cable
- Transformer must be placed in centre of the connected fixtures
- Polarity: positive (+) = red or brown, minus (-) = black or blue
- Transformer-capacity 25% greater than the sum of conected fixtures

Geadviseerd kabelgeleider-oppervlak (mm²) bij kabellengtes van 1-50 mtr. voor 24 Volt parallel aangesloten LED armaturen.

Note; Deze tabel is een vrijblijvend en geen dwingend advies. Maak indien nodig een berekening van elektrische weerstand en geleidbaarheid met de wet van Pouillet ($A \times R = p \times l$)

- Zoveel mogelijk kortste weg voor de 24V kabels
- Kabels aftakken zonder de hoofdkabel te onderbreken
- Trafo mogelijk in het midden plaatsen
- Polariteit: plus(+) = rood of bruin, min(-) = zwart of blauw
- Trafo-capaciteit 25% hoger kiezen dan de som der belastingen

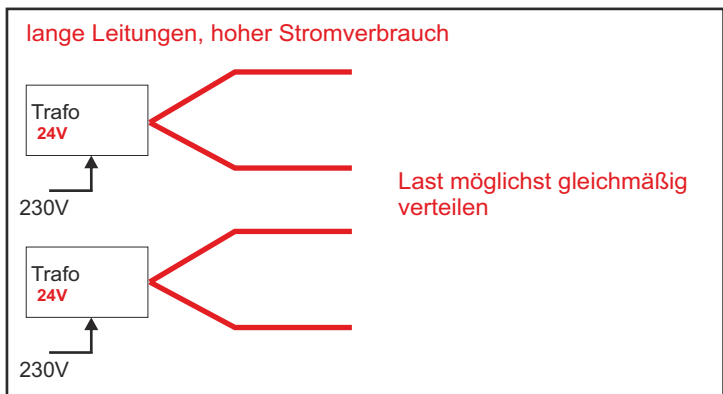

Empfohlener Querschnitt vom Kabelinnenleiter in mm² bei Kabellängen von 1-50 Meter für parallel geschaltete 24-Volt-LED-Leuchten.

Bitte beachten: Diese Tabelle ist eine unverbindliche Beratung. Falls erforderlich, eine Berechnung vom elektrischen Widerstand und Leitfähigkeit mit der Formel von Pouillet machen

- So viel wie möglich dem kürzesten Weg für die 24V-Leitungen
- Kabel abzweigen ohne Unterbrechung der Hauptleitung
- Trafo wenn möglich in der Mitte montieren
- Polarität: positiv(+) = rot oder braun, minus(-) = schwarz oder blau
- Trafo-Kapazität immer 25% größer wählen als die Summe der Last

Surface recommandée conducteur de câble (mm²) 1-50 m longueurs de câble. connectés en parallèle pour 24 volts luminaires à LED.

Remarque, Ce tableau est un des conseils informels et non contraignants. Si nécessaire, un calcul de résistance électrique et la conductivité avec la loi de Pouillet ($A \times R = p \times l$)

Choisir le chemin le plus court pour les câbles 24V

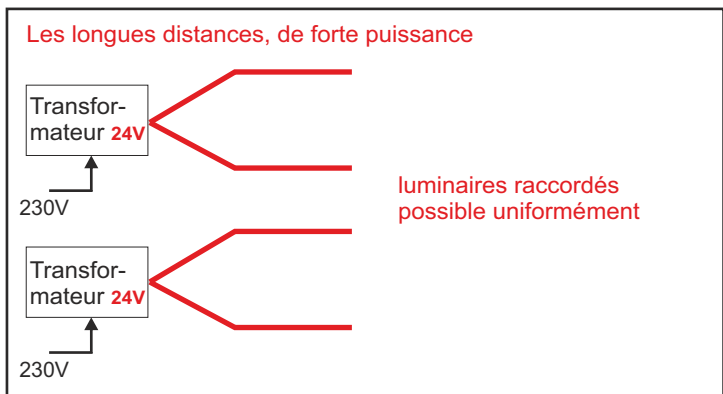

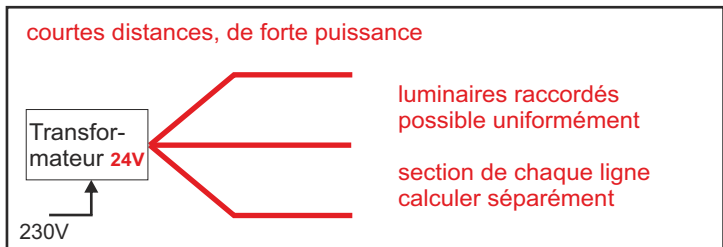

Éclaircie câbles sans interrompre le câble principal

Transformateur peut être centrée

Polarité: positive (+) = rouge ou brun, moins (-) = noir ou bleu

Transformateur-capacité de 25% de plus que de choisir la charge

LED-lampes Parallèlement interrupteur

Sección de cable recomendada en mm² con longitudes de cable 1-50 metros. para conectar en paralelo de 24 voltios LED fixtures.

Note; Este cuadro es un consejo informal y no vinculante. Si es necesario, un cálculo de resistencia eléctrica y la conductividad con la ley de Pouillet ($A \times R = p \times l$)

Intente utilizar la mínima distancia de cable en líneas de 12V.

Intente utilizar una línea principal sin cortarlo y sacar de el derivaciones individuales

Si es posible coloque la fuente de alimentación en el centro de la línea [principal de distribución]

Polaridad: positivo (+) = rojo o marrón, negativo (-) = negro o azul

La fuente de alimentación debe ser 25% mayor que la suma de las luminarias a conectar

distancias cortas, de baja potencia

distancias cortas, de alta potencia

distancias largas, de baja potencia

distancias largas, de alta potencia
